

SOTI®

ENTERPRISE MOBILITY MANAGEMENT

SOTI hub

SOTI hub is a secure content management application for businesses looking to deploy corporate content to their mobile workforce. It is available for Apple iOS and Google Android and can be downloaded from the Apple App Store and the Google Play Store. SOTI hub gives end-users anytime, anywhere access to corporate content, even caching it within the application for secure offline use. The integrated secure document viewer enables users to download and view files on their mobile device without requiring a third-party application. SOTI hub removes the complexity and risk around deploying corporate content and helps business take mobility to endless possibilities.

SOTI Mobile Content Management

SOTI hub, together with SOTI surf and SOTI Content Library provide enterprises with a comprehensive suite of mobile content management tools. It doesn't matter how big the company is, or what their line of business is, SOTI makes it easy for companies to control and curate key enterprise files and documents — training documentation, sales manuals, product specifications, and even video content can be distributed and managed through SOTI Content Library, SOTI hub, and SOTI surf.

SOTI hub features and benefits

Control content access and distribution

SOTI hub delivers many enterprise content management features for iOS and Android mobile device users.

- Active Directory (AD) support and integration with Microsoft SharePoint means that users can search and download files from the same file repositories that they use back in the office.
- IT staff uses groups and profiles on the SOTI MobiControl admin console to configure which employees, can see what files and folders.
- IT staff controls what files users can download based on what network they are using or where they are located.

Keep content secure

SOTI hub controls access to enterprise files and keeps them encrypted and secure on the mobile device.

- Access important content even when the mobile device is offline. Files are stored in a secure SOTI hub “sandbox” and are only accessible by signing into the application through AD.
- Download MS Office and PDF files and use the integrated secure document viewer on their mobile device. Data Loss Prevention (DLP) features prevent external viewing, printing and sharing.
- Lock down local content if a device is un-enrolled (leaves management). Alternatively, IT staff can selectively lock down and wipe files in the SOTI hub sandbox.

Improve the user experience

SOTI hub makes it easy for the mobile user to search and view corporate content on their mobile device.

- Faster file searching of large repositories with background Search on Server (SOS). Enables searches of up to 400,000 files and folders.
- Minimize data transfer costs by only displaying file header information on the mobile device until a file is downloaded.
- Search and display filters make it easier to find files on the server and within the local repository. Users can mark files as favourites for quick access.
- Print files using Android CloudPrint and Apple AirPrint.
